Dear Hiring Manager,

As a frontend-focused software engineer with hands-on experience in React, TypeScript, and cross-platform H5 development, I am excited to apply for the Frontend Engineer position. With a background spanning MERN and UniApp stacks combined with a Master's degree in Computer Science, I am looking for a role where I can contribute to building polished, user-facing products at scale.

Building responsive user interfaces with React and MaterialUI

In my Travel Planner project, I built a complete full-stack MERN application with a React frontend and MaterialUI component library. I was responsible for the entire UI layer – from responsive layout design to interactive trip management – as well as the Redux state management architecture that kept the client-side data flow predictable and testable. This project gave me deep experience with component composition, API integration, authentication flows, and the kind of attention to detail that separates a working prototype from a polished product.

Cross-platform mobile development with UniApp

At the Stealth AI startup, I developed the H5 frontend for an AI-powered Q&A mobile application using UniApp – a React-based cross-platform framework. I created responsive, accessible UI components from scratch and worked closely with the backend team to integrate RESTful API endpoints. I also led documentation efforts in GitBook and contributed to Docker-based deployment. This role sharpened my ability to ship production-quality code in a fast-paced startup environment.

Collaborative engineering in Agile environments

During two years of IT consulting at InsightSec, I worked across multiple international enterprise projects simultaneously – coordinating developers, designers, QA, and external stakeholders. I authored functional specifications and user stories, ran sprint planning sessions, and facilitated daily stand-ups. This experience gave me a strong product-minded approach to engineering: I think about the end user, not just the implementation.

I am excited about the opportunity to contribute to your frontend team and would welcome the chance to discuss how my experience and skills align with your needs. Thank you for your time and consideration.

Best regards,

Yuanshuo Du
